Features:

- Back pressure-free condensate discharge even at extreme pressure- and quantity fluctuations
- Controller with integrated automatic ventilation (except Fig. 636)
- Robust and insensitive to waterhammer
- Non return protection (except Fig. 635)
- Union for pressure compension line and bypass possible
- On-site change of the installation position is possible according to the operating instructions
- The controller maybe changed without disturbing the pipe work
- Pressure test acc. to API 598
- CRN approved

Types of connection

Other types of connection on request.

- Flanges1 _____ acc. to ASME B16.5
- Screwed sockets2 _____ NPT thread acc. to ANSI B1.20.1 or Rp thread acc. to DIN EN 10226-1
- Socket weld ends3 _____ acc. to ASME B16.11
- Butt weld ends4 _____ ASME B16.25 (Note restriction on operating pressure / inlet temperature depending to design!)

Features

- Ball float steam trap with level control for the condensate-discharge from all kinds of steam systems
- Rapid system start-up due to thermostatic air venting capsule (for condensate with temperatures $\geq 100^\circ\text{C}$)
- Immediate discharge of hot boiling condensat
- Discharge of great condensate quantities even at low differential pressure
- ANSI150 without strainer / ANSI300 with outside strainer - Fig. 634 (Y)
- Body with flanged hood
- Non return protection
- The controller maybe changed without disturbing the pipe work

Mounting position

- Standard: vertical
 - Optional: horizontal with inlet from right or left
- Please indicate when ordering!**
 Refer to: Information about the different installation positions (Page 13)
 On-site change of the installation position is possible according to the operating instructions.

Options

- Vent plug (Pos. 47)
- Plug (Pos. 50)
- Manual air vent valve (Pos. 51)
- Ball valve for blow down (Pos. 56)

Options

Vent plug (Pos. 47),
 Plug (Pos. 50),
 Manual air vent valve (Pos. 51),
 Ball valve for blow down (Pos. 56)
 (restricted to 16 bar, 210°C)

Capacity chart

The capacity chart shows the maximum flow of hot boiling condensate.

The total cold water capacity is the result of:

- The capacity of the trap is increased by 1,2 x the value shown in the capacity chart.
- The thermostatic air vent is open, provided additional capacity as shown in the table

Additional cold water-flow quantity of the thermostatic steam trap at starting conditions

Informations about pipe welding
Welding groove acc. to ASME B16.25

The material used for ARI valves with butt weld ends are:

SA105

SA182F321

Due to our experience, we recommend to apply an electric welding process.

Because of the different material compositions and wall thickness of the steam traps and the pipe gas welding shall not be applied. Quenching cracks and coarse grain structure may develop.

Steam traps with socket-weld ends shall only be welded by arc welding (welding process 111 acc. to DIN EN 24063).

If during the time of warranty others than the manufacturer or by the manufacturer authorized persons are interfering in the product and/or the setting, the right of claim for warranty will lapse!

Integrated non return protection

The internal plate acts at series 634 and 636 as integrated check valve..

In case of parallel installed heat exchangers or heater batteries the non return protection prevents a shut down heat-exchanger for flooding with condensate from the downstream side and reverse heating up.

A check valve which otherwise has to be installed is not necessary.

Installation with recovery pipe

Important:

The installation of a recovery pipe for gas return is always recommended; especially if the ball float steam trap is installed horizontally.

Selection criteria:		Example for order data:
<ul style="list-style-type: none"> • Steam pressure • Back pressure • Quantity of condensate • Flow medium • Nominal diameter / pressure 	<ul style="list-style-type: none"> • Type of connection • Material • Place of service or kind of steam consumer 	Ball float steam trap CONA® SC, Fig. 634, ANSI150, NPS 1", SA105/SA216WCB, R14, with flanges, Face-to-face dimension 160 mm
Other installation positions than standard (vertical) have to be indicated together with the information about the flow direction i.e. inlet from left or right		

Standard-flange dimensions acc. to ASME B16.5

	ØK	(mm)	66,5	82,5	89
	n x Ød	(mm)	4 x 16	4 x 19	4 x 19

Information about the different installation positions (shown at Fig. 634 CONA® SC ANSI)

Installation (see picture)

The ball float steam traps can be installed either in vertical (standard) or horizontal position. In case of horizontal installation please indicate whether the inlet is from the left or right side.

The steam trap can also be converted on site to match the different installation positions. Please observe the appropriate operating manuals.

The steam trap must be fitted with the direction of flow as indicated by the arrow on the body.

Enough clearance (refer to dimension S) for the removal of the hood shall be provided.

The steam trap shall preferably be installed at the lowest point of the system and the membrane capsule resp. the bleeding tube shall be installed in an upright position inside of the hood.

For the modification of the installation position observe the operating manual.

A modification of the installation position during the time of warranty shall be carried out by the AWH-Service or it shall be agreed between the customer and manufacturer.
