1 General information

1.1 Information

- The descriptions and instructions apply to the standard versions. For special versions not described in this document the basic information contained herein applies in combination with any additional special documentation.
- Correct installation, operation, maintenance and repair work ensure faultless operation of the product.
- Should there be any doubts or misunderstandings, the German version is the authoritative document.
- Contact us at the address on the last page for staff training information.

1.2 Symbols used

The following symbols are used in this document:

Symbol	Meaning		
•	Tasks to be performed		
►	Response(s) to tasks		
_	Lists		

1.3 Definition of terms

Working medium

The medium that flows through the GEMÜ product.

Control medium

The medium whose increasing or decreasing pressure causes the GEMÜ product to be actuated and operated.

Control function

The possible actuation functions of the GEMÜ product.

1.4 Warning notes

Wherever possible, warning notes are organised according to the following scheme:

	SIGNAL WORD				
Possible symbol for the specific danger	 Type and source of the danger Possible consequences of non-observance. Measures for avoiding danger. 				

Warning notes are always marked with a signal word and sometimes also with a symbol for the specific danger.

The following signal words and danger levels are used:

▲ DANGER			
	 Imminent danger! Non-observance can cause death or severe injury. 		

Potentially dangerous situation!

 Non-observance can cause death or severe injury.

ACAUTION

Potentially dangerous situation!

 Non-observance can cause moderate to light injury.

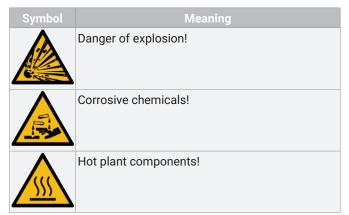

NOTICE

Potentially dangerous situation!

 Non-observance can cause damage to property.

The following symbols for the specific dangers can be used within a warning note:

2 Safety information

The safety information in this document refers only to an individual product. Potentially dangerous conditions can arise in combination with other plant components, which need to be considered on the basis of a risk analysis. The operator is responsible for the production of the risk analysis and for compliance with the resulting precautionary measures and regional safety regulations.

The document contains fundamental safety information that must be observed during commissioning, operation and maintenance. Non-compliance with these instructions may cause:

- Personal hazard due to electrical, mechanical and chemical effects.
- Hazard to nearby equipment.
- · Failure of important functions.
- Hazard to the environment due to the leakage of dangerous materials.

The safety information does not take into account:

- Unexpected incidents and events, which may occur during installation, operation and maintenance.
- Local safety regulations which must be adhered to by the operator and by any additional installation personnel.

Prior to commissioning:

- 1. Transport and store the product correctly.
- 2. Do not paint the bolts and plastic parts of the product.
- 3. Carry out installation and commissioning using trained personnel.
- 4. Provide adequate training for installation and operating personnel.
- 5. Ensure that the contents of the document have been fully understood by the responsible personnel.
- 6. Define the areas of responsibility.
- 7. Observe the safety data sheets.
- 8. Observe the safety regulations for the media used.

During operation:

- 9. Keep this document available at the place of use.
- 10. Observe the safety information.
- 11. Operate the product in accordance with this document.
- 12. Operate the product in accordance with the specifications.
- 13. Maintain the product correctly.
- 14. Do not carry out any maintenance work and repairs not described in this document without consulting the manufacturer first.

In cases of uncertainty:

15. Consult the nearest GEMÜ sales office.

3 Product description

3.1 Construction

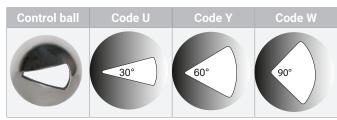

ltem	Name	Materials
1	Ball valve body	1.4408 invest- ment casting (316)
	Ball	1.4401 invest- ment casting (316)
	Seal material	PTFE

3.2 Pressure-relief hole

3.3 Control ball

Note: The control ball cannot be retrofitted to standard 2/2way bodies at a later date.

3.4 Description

The GEMÜ BB06 metal one-piece 2/2-way ball valve has a bare shaft. The seat seal is made of PTFE.

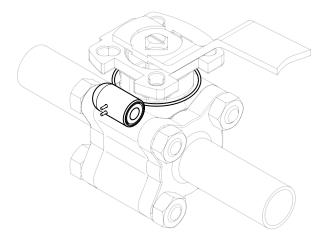

3.5 Function

The product is designed for use in piping. It controls a flowing medium after a bonnet (see GEMÜ B26), pneumatic actuator (see GEMÜ B46) or motorized actuator (see GEMÜ B56) has been mounted.

4 GEMÜ CONEXO

Installing the RFID chip

In the corresponding design with CONEXO, this product has an RFID chip (1) for electronic recognition. The position of the RFID chip can be seen below.

5 Correct use

▲ DANGER

Danger of explosion!

- Risk of severe injury or death.
- Do not use the product in potentially explosive zones.
- Only use the product in potentially explosive zones confirmed in the declaration of conformity.

Improper use of the product

- Risk of severe injury or death.
- Manufacturer liability and guarantee will be void.
- Only use the product in accordance with the operating conditions specified in the contract documentation and in this document.

The product is designed for installation in piping systems and for controlling a working medium.

- 1. Use the product in accordance with the technical data.
- 2. Note the supplement acc. to ATEX

6 Order data

The order data provide an overview of standard configurations.

Please check the availability before ordering. Other configurations available on request.

9 Manufacturer's information

9.1 Delivery

• Check that all parts are present and check for any damage immediately upon receipt.

The product's performance is tested at the factory. The scope of delivery is apparent from the dispatch documents and the design from the order number.

9.2 Packaging

The product is packaged in a cardboard box which can be recycled as paper.

9.3 Transport

- 1. Only transport the product by suitable means. Do not drop. Handle carefully.
- 2. After the installation dispose of transport packaging material according to relevant local or national disposal regulations / environmental protection laws.

9.4 Storage

- 1. Store the product free from dust and moisture in its original packaging.
- 2. Avoid UV rays and direct sunlight.
- 3. Do not exceed the maximum storage temperature (see chapter "Technical data").
- Do not store solvents, chemicals, acids, fuels or similar fluids in the same room as GEMÜ products and their spare parts.
- 5. Store the ball valves in the "open" position.

10 Installation in piping

10.1 Preparing for installation

\Lambda WARNING

The equipment is subject to pressure!

- ▶ Risk of severe injury or death.
- Depressurize the plant.
- Completely drain the plant.

WARNING Corrosive chemicals!

- Risk of caustic burns.
- Wear suitable protective gear.
- Completely drain the plant.

<u>sss</u>

- Hot plant components!Risk of burns.
- Only work on plant that has cooled down.

ACAUTION

Exceeding the maximum permissible pressure.

- Damage to the product.
- Provide precautionary measures against exceeding the maximum permitted pressures caused by pressure surges (water hammer).

Use as step.

- Damage to the product.
- Risk of slipping-off.
- Choose the installation location so that the product cannot be used as a foothold.
- Do not use the product as a step or a foothold.

NOTICE

Suitability of the product!

The product must be appropriate for the piping system operating conditions (medium, medium concentration, temperature and pressure) and the prevailing ambient conditions.

NOTICE

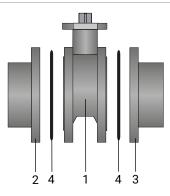

Tools

- The tools required for installation and assembly are not included in the scope of delivery.
- Use appropriate, functional and safe tools.
- 1. Ensure the product is suitable for the relevant application.
- 2. Check the technical data of the product and the materials.
- 3. Keep appropriate tools ready.
- 4. Wear appropriate protective gear, as specified in the plant operator's guidelines.
- 5. Observe appropriate regulations for connections.
- 6. Have installation work carried out by trained personnel.
- 7. Shut off plant or plant component.
- 8. Secure plant or plant component against recommissioning.
- 9. Depressurize the plant or plant component.
- 10. Completely drain the plant (or plant component) and let it cool down until the temperature is below the media vaporization temperature and cannot cause scalding.
- 11. Decontaminate, rinse and ventilate the plant or plant component properly.
- 12. Lay piping so that the product is protected against transverse and bending forces, and also from vibrations and tension.
- 13. Only mount the product between matching aligned pipes (see following chapters).
- 14. Flow direction and installation position are optional.

10.2 Installation with flanged connections

NOTICE

Observe valid standards for mounting flanges!

- 1. Ensure sealing surfaces on the mating flanges are clean and undamaged.
- 2. Only use connector elements made of approved materials.
- 3. Install the ball valve in the state it is delivered.
- 4. Carefully align the ball valve body **1** centrally between the pipes with flanges (**2** and **3**).
- 5. Centre the seals **4** accurately. Seals are not included in the scope of delivery.
- 6. Connect the ball valve flange and the piping flange using appropriate sealing material and matching bolting. Sealing material and bolts are not included in the scope of delivery.

11 Commissioning

WARNING

- Corrosive chemicals!
- Risk of caustic burns.
- Wear suitable protective gear.
- Completely drain the plant.

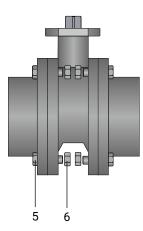

Leakage

- Emission of dangerous materials.
- Provide precautionary measures against exceeding the maximum permitted pressures caused by pressure surges (water hammer).
- 1. Check the tightness and the function of the product (close and reopen the product).
- 2. Flush the piping system of new plant and following repair work (the product must be fully open).
 - ⇒ Harmful foreign matter has been removed.
 - ⇒ The product is ready for use.
- 3. Commission the product.

12 Operation

The product is operated via manual, pneumatic or motorized actuators.

• Observe the enclosed actuator instructions.

- 7. Insert bolts 5 in all holes in the flange.
- 8. Slightly tighten the bolts **5** and nuts **6** diagonally.

- 9. Check the alignment of the piping.
- 10. Tighten the nuts **6** diagonally.

Comply with appropriate regulations for the connections.

10.3 After the installation

• Re-attach or reactivate all safety and protective devices.

13 Troubleshooting

Error	Possible cause	Troubleshooting
The product doesn't open or doesn't open fully	Operating pressure too high	Operate the product with operating pres- sure specified in datasheet
	Foreign matter in the product	Remove and clean the product
The product doesn't close or doesn't close fully	Operating pressure too high	Operate the product with operating pres- sure specified in datasheet
	Foreign matter in the product	Remove and clean the product
Connection between valve body and pip-	Incorrect installation	Check installation of valve body in piping
ing leaking	Flange bolting loose/thread leaking	Retighten flange bolting / reseal threads
	Flange seals faulty	Replace flange seals
	Sealing material faulty	Replace sealing material
	Threaded connections / unions loose	Tighten threaded connections / unions
Valve body leaks	Incorrect installation	Check installation of valve body in piping
	Seat and flange seals incorrectly moun- ted	Mount seat and flange seals correctly
	Seat and flange seals faulty	Replace seat and flange seals
	Valve body leaks or is corroded	Check valve body for damage, replace valve body if necessary

14 Inspection/maintenance

ACAUTION

Hot plant components!

- Risk of burns.
- Only work on plant that has cooled down.

The equipment is subject to pressure!

- Risk of severe injury or death.
- Depressurize the plant.
- Completely drain the plant.

- Servicing and maintenance work must only be performed by trained personnel.
- In case of doubt, contact GEMÜ prior to commissioning.
- 1. Use appropriate protective gear as specified in plant operator's guidelines.
- 2. Shut off plant or plant component.
- 3. Secure against recommissioning.
- 4. Depressurize the plant or plant component.

Ball valves are maintenance-free. No lubrication or routine maintenance of the ball valve shaft is required. The shaft is guided through a PTFE gland packing in the ball valve body. The shaft seal is pretensioned and self-adjusting. However, the operator must carry out regular visual examinations of the ball valves, dependent on the operating conditions and the potential danger in order to prevent leakage and damage.

If there is a leakage at the spindle nut, this can generally be rectified by retightening the spindle nut. However, overtightening the spindle nut must be avoided.

Usually, retightening by between 30° and 60° will be sufficient to rectify the leakage.

15 Removal from piping

- 1. Remove the clamp or screw connections in reverse order to installation.
- 2. Remove welded or solvent cemented connections using a suitable cutting tool.
- 3. Observe the safety information and accident prevention regulations.

16 Disposal

- 1. Pay attention to adhered residual material and gas diffusion from penetrated media.
- 2. Dispose of all parts in accordance with the disposal regulations/environmental protection laws.

17 Returns

Legal regulations for the protection of the environment and personnel require that the completed and signed return delivery note is included with the dispatch documents. Returned goods can be processed only when this note is completed. If no return delivery note is included with the product, GEMÜ cannot process credits or repair work but will dispose of the goods at the operator's expense.

- 1. Clean the product.
- 2. Request a return delivery note from GEMÜ.
- 3. Complete the return delivery note.
- 4. Send the product with a completed return delivery note to GEMÜ.
