

Pressure relief valve, Plastic

Construction

The pressure relief valves GEMÜ N085 and N185 protect the plant and the piping system against gauge pressure and reduces pressure peaks. The third pipe spigot enables the valve to be installed in the main pipe. If the pressure increases, the spring is raised and the valve opens. The pressure is reduced to the preset value and can escape via the third pipe spigot into an adjacent pipe. If the pressure falls, the spring force presses the diaphragm in the direction of the seal seat and it is closed. The spring force can be adjusted as required using a set screw.

Technical specifications*

- Nominal sizes: DN 10 to DN 100
- Connections: Spigots, flanges, union ends with insert
- Body materials: PVC-U, PP-B, PVDF
- Seal materials: EPDM, PTFE
- Media temperature: -20 °C to +100 °C
- Setting range: 0.5 to 10 bar

Advantages

- Valve adjustments can also be made under working pressure.
- The optimization of piston, springs and control face ensures good control characteristics.
- The actuator is hermetically separated from the medium.

*Dependent on version and/or operating parameters

Sectional view

Technical data

Working medium

Corrosive, inert, liquid media which have no negative impact on the physical and chemical properties of the body and seal material. Approved for fluids of Group 1 in accordance with directive 2014/68/EC Article 13 ature is a maximum of 0.5 bar above the normal atmospheric pressure (1013 mbar).

Working medium temperature

Valve body PVC-U	0 to 60 °C
Valve body PP-B	0 to 80 °C
Valve body PVDF	-20 to 100 °C

The permissible operating pressure depends on the working medium temperature.

Ambient conditions

Ambient temperature	0 to 60 °C
